

### **Intra-vedere l'onda (Intra-seeing the wave)**

A reticulated rectangular structure is arranged in a vertical and horizontal twist and like a wave it moves supported by a base. Its natural dimensions will be: 2.60 m high by 6m long. The construction covered by fibreglass enables one to see through the substance of the metallic structure. The drawing then winds itself onto the substance of the “urbana” (urban) surface interacting with man's environment and natural events.
